

## Revolution – Innovation - Convenience

**Schena Ostomy Technologies** is pleased to announce further revolutionary innovation with the introduction of the new **EZ-Clean Flo-Thru Pouch**. Ostomates spoke and we listened to what was needed to make life easier and more normal with a bowel diversion. Available in clear and opaque, the Flo-Thru Pouch has an opening at the top of the pouch and a drain at the bottom that permits the user to sit on the toilet, with the pouch attached, and pour water through to facilitate cleaning out the waste contents. The inlet can also be used to release gas in the pouch (in an appropriate location) and the pouch is very thin with a Hydrocolloid Skin Barrier Wafer that has our unique Perimeter Seal to provide body attachment integrity.

This unique patent pending design allows the user to pour water from the top down rather than from the bottom up so the risk of a mishap when dropping the contents has been eliminated. The user can pour multiple containers of water into the top of the pouch until the satisfactory level of cleaning has been accomplished. There is no bagging of pouches full of body waste, it is deposited into the toilet and flushed away allowing a sanitary process for handling waste disposal needs. We have always considered the user needs when designing products to make life with an ostomy as normal as possible.

The exhibits depict the EZ-Clean Flo-Thru Pouch in the open, closed and in use positions. Samples are available from our Web Site: [www.ostomyezclean.com](http://www.ostomyezclean.com) or by calling 239 263-9957.
