

Security Lock Tabs for EZ - Clean Pouch

Tab Installation Guide:

The fold tabs are designed to provide a measure of security to insure no possibility of the drain opening by accident causing a problem for the user.

The security tab is fastened to the plastic stiffening strip at the end of the pouch drain. Align the tab on the plastic fold strip at the drain opening. Clean the plastic fold strip with alcohol to assure a good bond. The adhesive backing must be removed from the tab, align and attach (see illustration #1) to the strip. Press down and hold for 10 seconds to insure good adhesion.

Bend Tabs to Secure

When using the EZ- Clean System it is important to perform the following steps to insure trouble free cleaning:

1. Bend tabs out straight to allow unfolding the drain opening of the pouch as shown in illustration # 1.
2. Bend the security tab to form a “W” as shown in the illustration # 4 below. Allow the drain to open permitting easy expulsion of waste material. When cleaning has been completed, straighten the tab and seal by rolling toward you until the docking tab appears. Bend tabs closed to seal opening as shown in # 3 above.
